

LIST OF FIGURES

Figure 1 PJM Service Area, 2012. 2

Figure 2 Nicola Tesla 7

Figure 3 George Westinghouse 8

Figure 4 A historical photograph of the Adams Power Station, Niagara Falls, New York. The buildings were designed by the prominent American architectural firm of McKim Mead and White. 9

Figure 5 The Agricultural Building and “Court of Honor” at the Columbian Exposition in Chicago, 1893. The age of light that Tesla did so much to bring about was exemplified in this scene. At nightfall “stopper” (or Sawyer-Man) lamps by Westinghouse provided the most spectacular lighting display the world had ever seen. 12

Figure 6 Old Folsom Powerhouse on the American River, 2006. Built in the late nineteenth century by the Livermores with prison labor from Folsom State Prison, the Folsom Powerhouse first delivered electricity to Sacramento in 1895. 13

Figure 7 Postcard of electric trolley-powered streetcars in Richmond, Virginia, in 1923, two generations after Frank J. Sprague successfully demonstrated his new system in 1888. 14

Figure 8 The Public Service Logo representing the three utilities owned by the company—Gas, Electric, and Traction. 15

Figure 9 Newark Electric Light & Power Co., Market Street Plant, 1899 16

Figure 10 A Public Service railway promotional brochure from the turn of the 20th Century. 17

Figure 11 The Public Service network of streetcars was composed of more than 100 predecessor companies. Ultimately, the system consisted of 900 miles of electric railway tract that that reached 147 municipalities in New Jersey. 18

Figure 12 Thomas Nesbitt McCarter. 19

Figure 13 The Marion Generating Station in Jersey City, Public Service’s first large electrical plant, which started operation in 1906. 22

Figure 14 Kearny Electric Station nearing end of construction in 1925 25

Figure 15 Public Service in 1932 27

Figure 16 Rendering of the Burlington Generating Station, 1940 29

Figure 17 Postcard, Conowingo Hydro-electric Development of the Philadelphia Electric Company system, ca. 1930. View of Conowingo Dam, owned by the Philadelphia Electric Company. Located on the Susquehanna River, 65 miles south of Philadelphia on U.S. Route 1. From an original painting by Daniel Garber. 35

Figure 18 Wallenpaupack Hydroelectric Plant, ca. 1925. While the dam was under construction three and a half miles away, the seldom seen Wallenpaupack Hydroelectric Station and its tall surge tank were taking shape down at Kimbles. Smoke from many steam engines obscures detail in the center of the photo. 36

Figure 19 The New York Times Power Pool Newspaper Clipping, c. 1927 37

Figure 20 Pennsylvania–New Jersey Interconnection, 1929. 42

Figure 21 Crew at Stillwater Camp, the housing for men who worked on the Bushkill to Roseland Portion of the PNJ Transmission Line. 43

Figure 22 Stillwater Camp Mess Hall, 1928. 44

Figure 23 Stillwater Camp Sleeping Quarters, 1928. 45

Figure 24 Plank roads and narrow gauge railways were built to transport supplies and equipment to construction sites. 46

Figure 25 Topmen hanging steel on the Roseland-Bushkill line. 46

Figure 26 Boardwalk and rail line through the swamp at Troy Meadows. 47

Figure 27 Inspector “riding the line” in a “bos’n chair.” 47

Figure 28 Roseland Switching Station. 48

Figure 29 Crew at Roseland Switching Station next to one of the four largest transformers in the world at the time of its installation in 1932. . . . 50

Figure 30 Historical photo showing lightning laboratory at Wallenpaupack. PP&L, Electric Bond and Share Co., and GE conducted a landmark study on lightning using the Wallenpaupack-Siegfried 220,000-volt line as one of the major facilities for the investigation. 51

Figure 31 Tower setup for vibration testing conducted by PSE&G, detail. 53

Figure 32 Tower setup for vibration testing conducted by PSE&G. 53

Figure 33 General Electric’s Charles A. Coffin Award. 54

Figure 34 The Public Service Building in Newark served as the company headquarters from 1916 until 1980. 56

Figure 35 Electricity in the Home, 1931. 57

Figure 36 Advertisements featuring Reddy Kilowatt, the cartoon mascot used to promote electricity for more than 30 years. 57

Figure 37 Recipe Booklet distributed by the Home Service Department at PSE&G. . . . 58

Figure 38 This 1953 promotional booklet by PSE&G featured foods grown in New Jersey and Blue Ribbon recipes that illustrated ways to prepare a variety of fresh fruits and vegetables. 59

Figure 39 In 1931 PSE&G had connections with utilities in Pennsylvania and New York, providing a power network across its service area and beyond. 62

Figure 40 PJM Control Center in 1979. 63

Figure 41 Keystone mine-mouth generating station, Shelocta, Pennsylvania. 64

Figure 42 View looking east from Times Square during blackout featured on the cover of LIFE Magazine, November 19, 1965. 65

Figure 43 Aerial view of the Salem Generating Station, 1977. 71

Figure 44 The Second Sun was a former ferry boat reconditioned for use as an educational center. The boat traveled from the Delaware at the Salem Generating Station on New Jersey’s waterways as a floating information center attended by the state’s schoolchildren. 72

Figure 45 Educational comic book distributed to schoolchildren who visited the Second Sun. 72

Figure 46 In 1971, PSE&G replaced the triangle-in-a-circle logo with the now well-known orange sunburst – reflecting their commitment to nuclear power and a healthy environment. Cartoonist Henry Martin depicted the new logo as a light illuminating a new day. 73

Figure 47 Above and Below, Conventional construction: crane, bucket truck, and linemen erect a new monopole in Montville. 74

Figure 48 Conventional Construction: lattice tower at Lake Mohawk. 75

Figure 49 MD 500 Helicopter. 76

Figure 50 Kim Hanneman, Vice President-Delivery Projects and Construction (left), John Ribardo, Manager of Transmission Projects-Delivery Projects and Construction, Project Manager for the Susquehanna-Roseland Transmission project (center), and Travis Harrold, Air-Crane Pilot (right) stand in front of an Erickson Air-Crane. 76

Figure 51 Air-Crane construction: lattice towers at Lake Denmark. 77

Figure 52 The tallest tower constructed on the new 500kV line is at Lake Denmark. The tower is 240 feet tall and accessed by a boardwalk painted green to blend with the environment. The tower at Lake Denmark was also constructed using the Air-Crane. 77

Figure 53 Hopatcong Switching Station under construction. 78

Figure 54 “Legs, arms, and body parts” used to assemble lattice towers fill the Tilcon Fly Yard located in the Township of Rockaway (Tilcon Mt. Hope Quarry). 78

Figure 55 Aerial View of Hopatcong Switching Station. 78

Figure 56 Path of the Susquehanna-Roseland 500kV Reliability Project. 79

Figure 57 The PJM and adjoining systems in 1972. 80

Figure 58 The History of PJM. 81

Figure 59 The PJM service area, 2012. 82
